Who we are and what we do

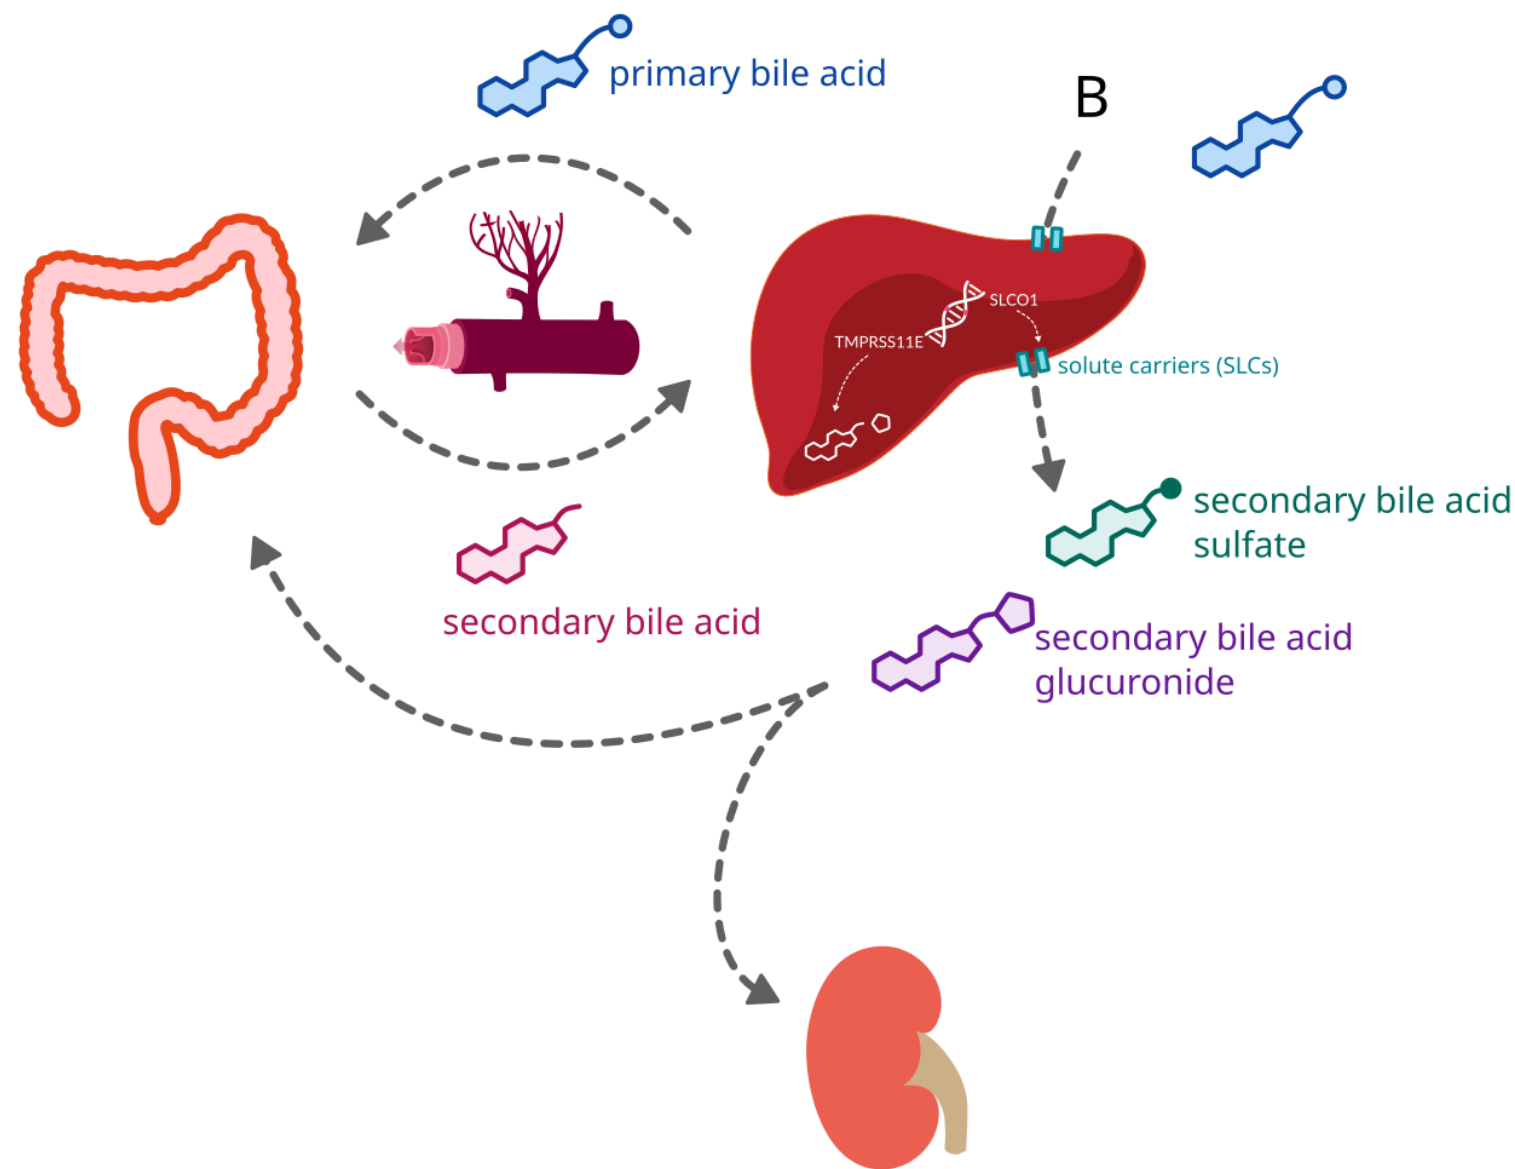

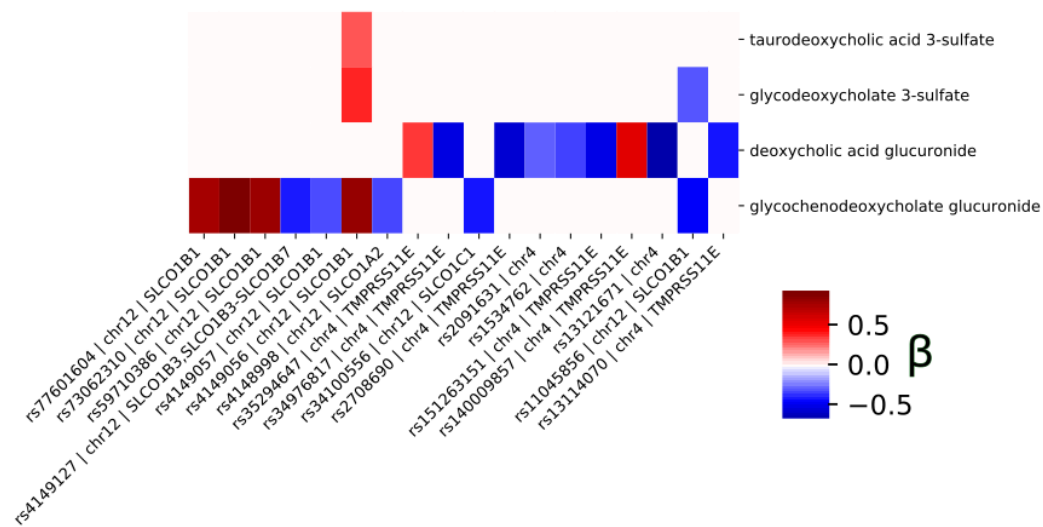

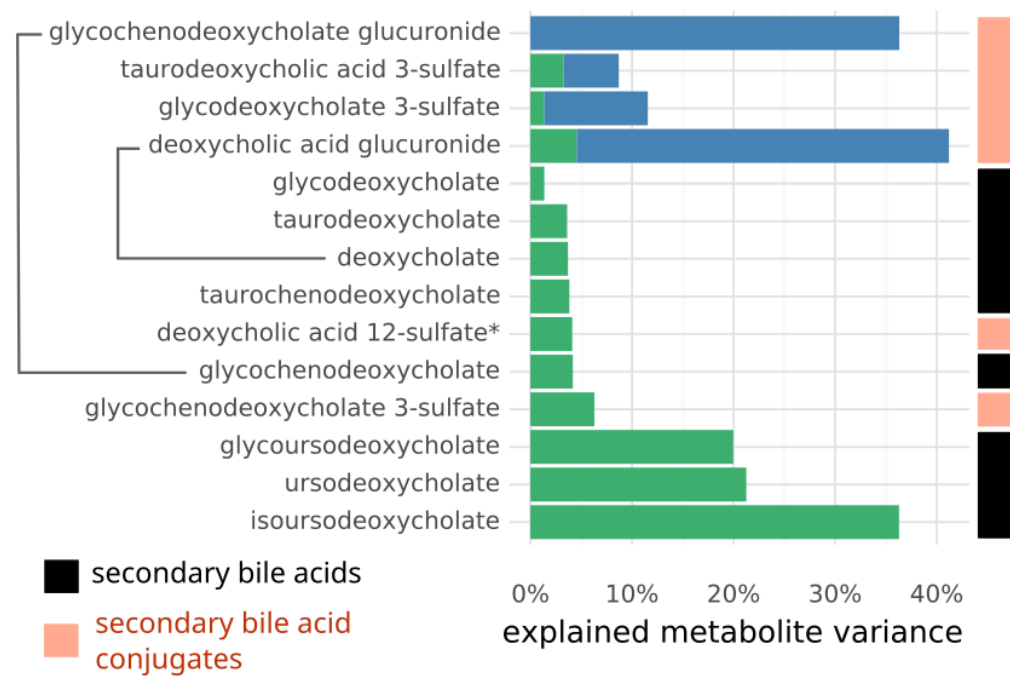

The blood-microbiome axis

Genome-microbiome interplay in the human blood metabolome

The fate of bile acids determined by genetics and the microbiome

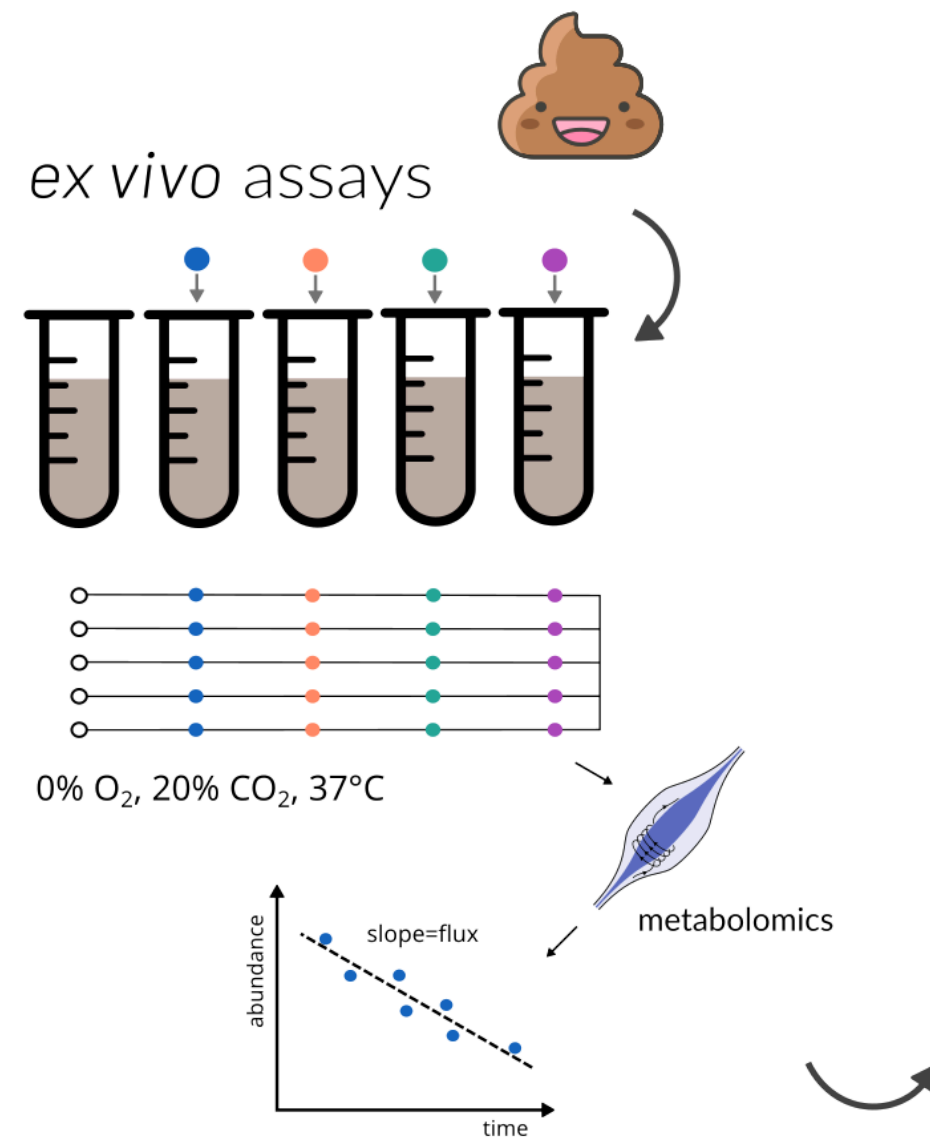

A row of chess pieces, including pawns, knights, and kings, is arranged on a dark, reflective surface. The lighting is dramatic, coming from the side, creating strong highlights on the pieces and their reflections, while the background is dark. The pieces are slightly out of focus, emphasizing the text in the foreground.

What are the rules?

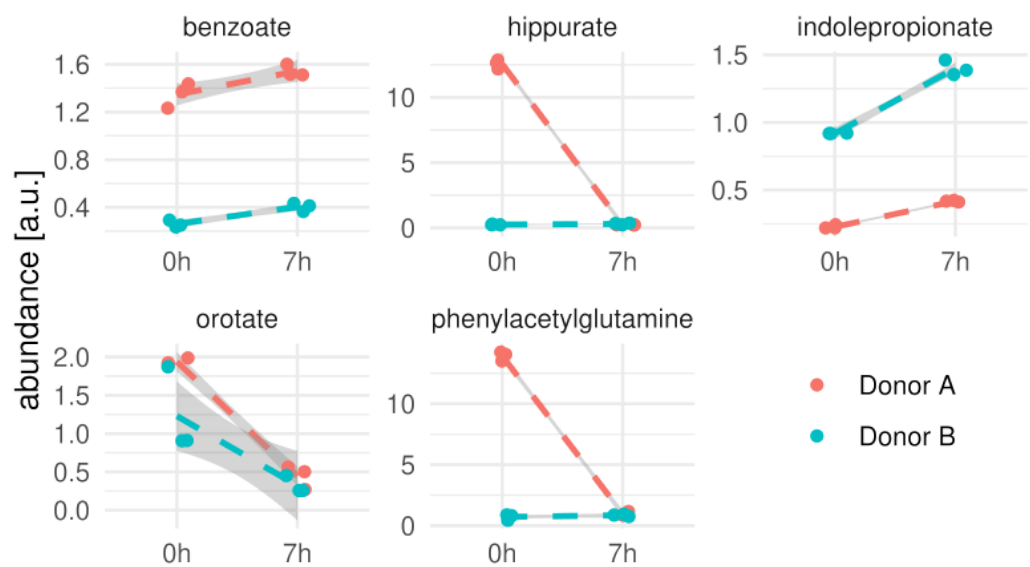

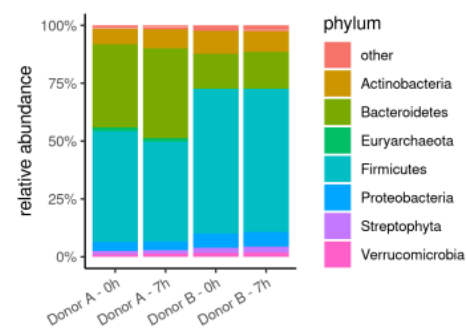

Though we can get associations from large cross-sectional studies the mechanisms remain unclear.

How do we get from correlation to intervention?

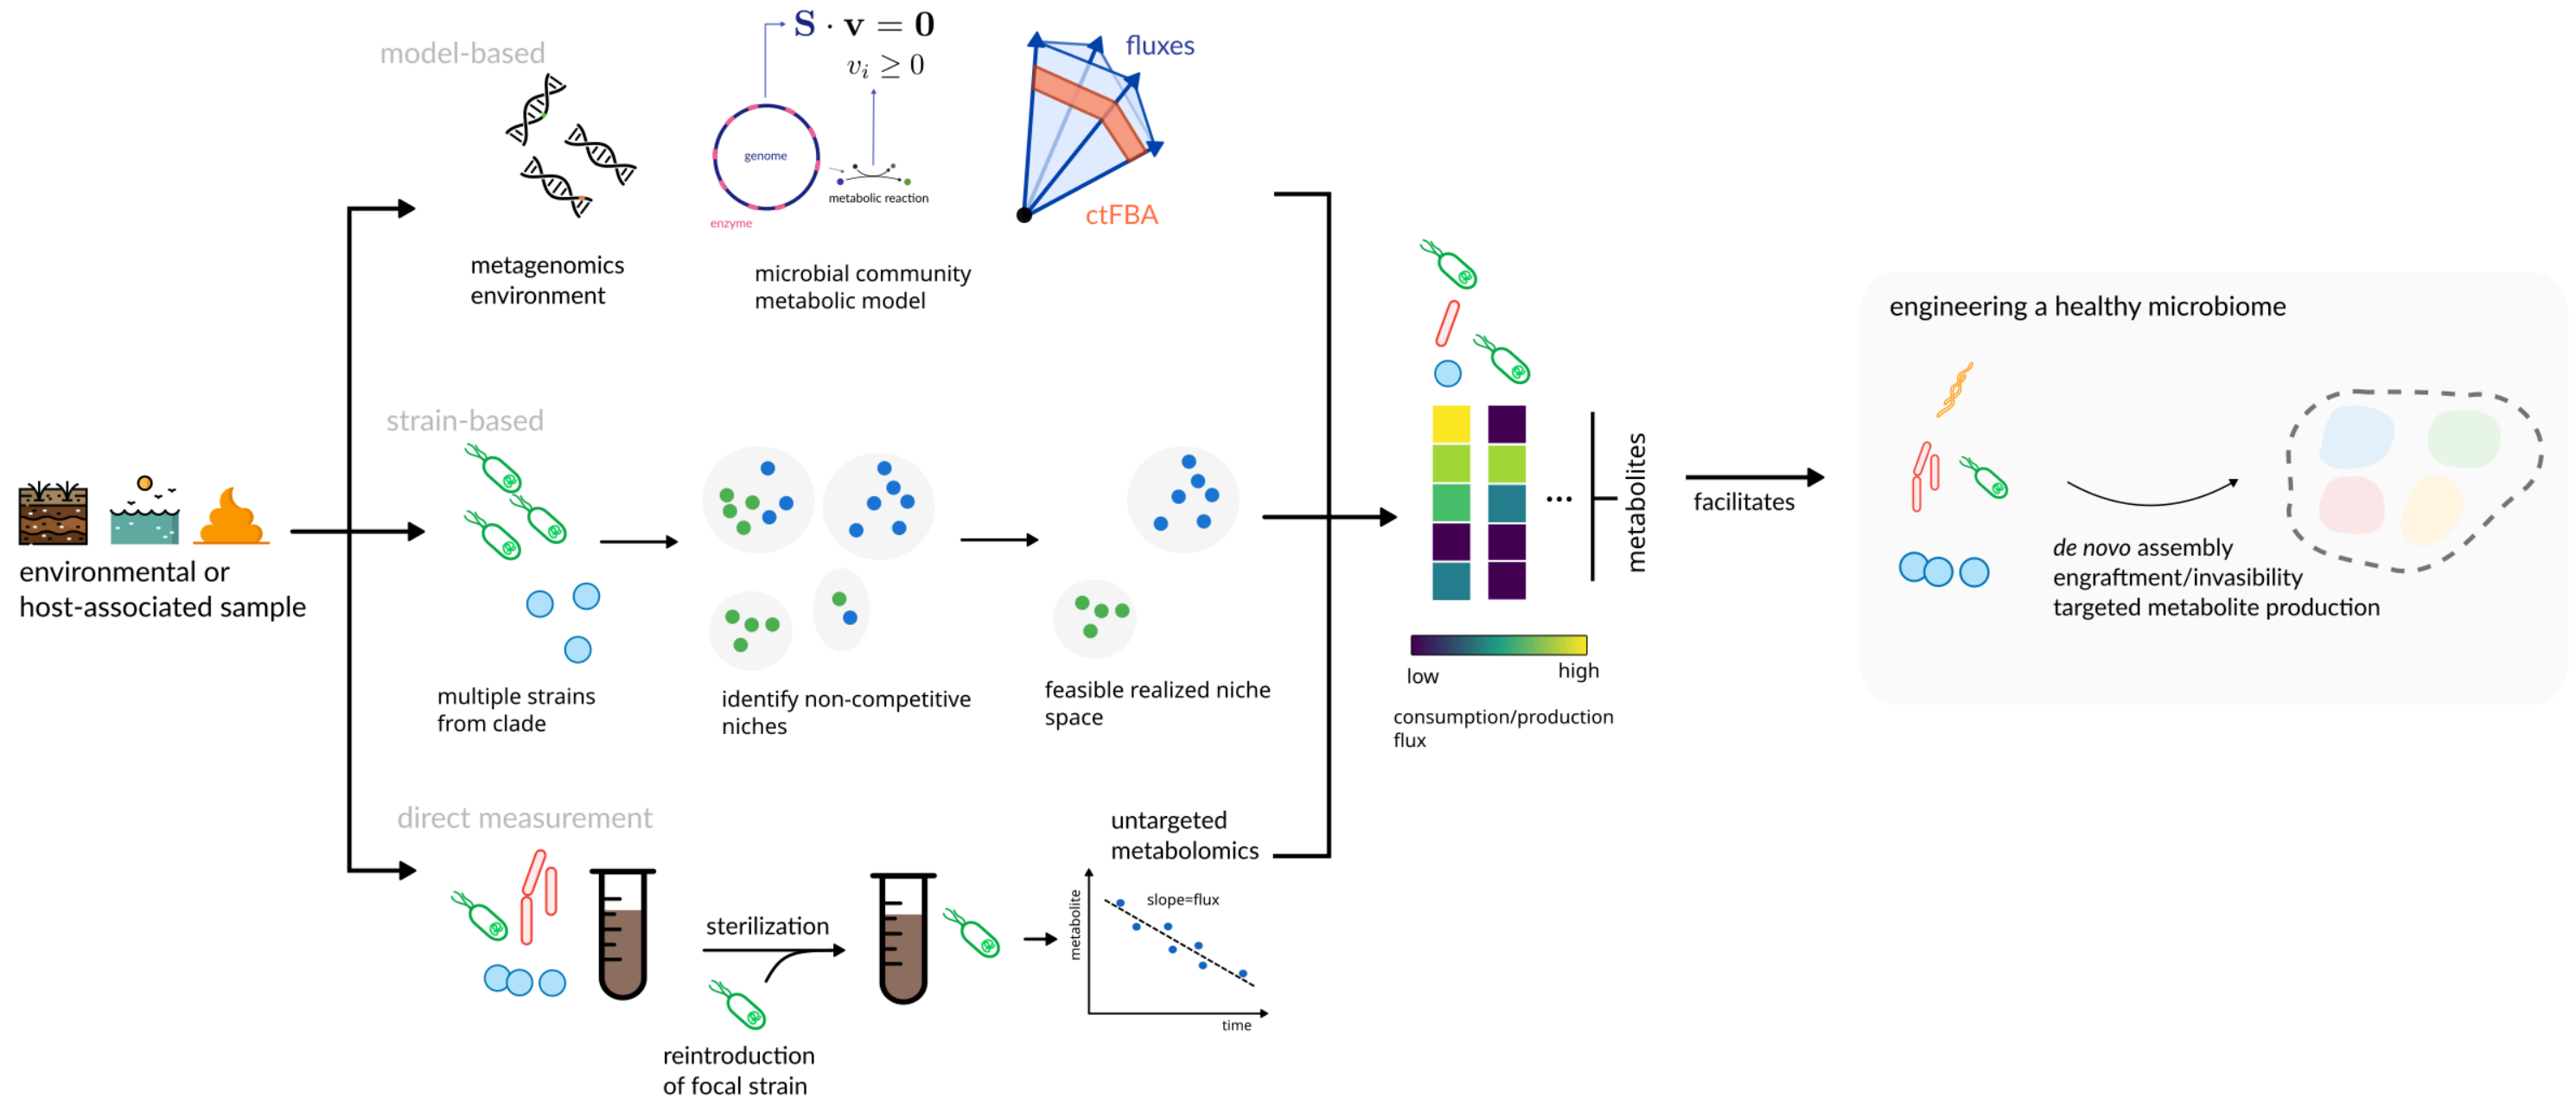

Anaerobic *ex vivo* fermentation

stable microbial composition

What's next?

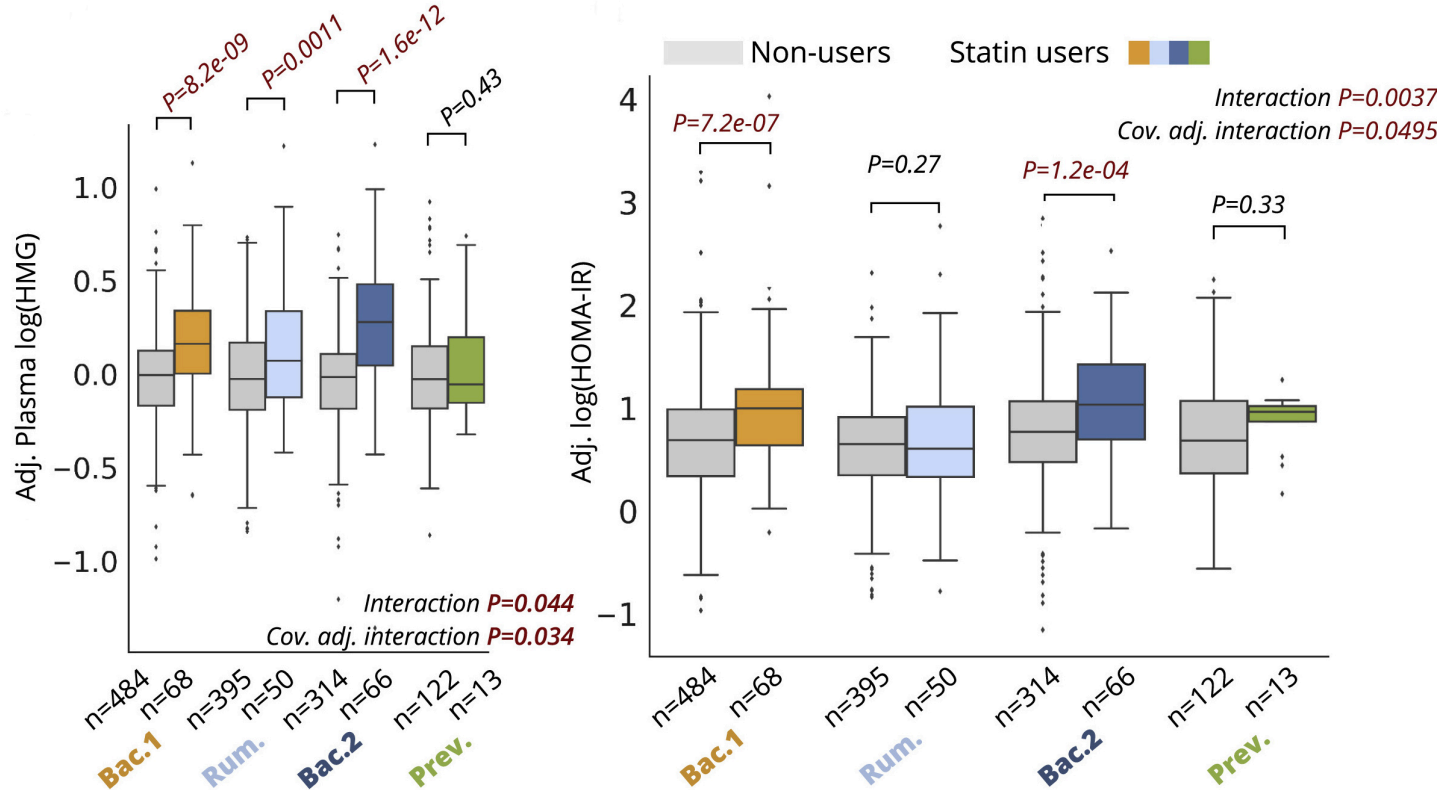

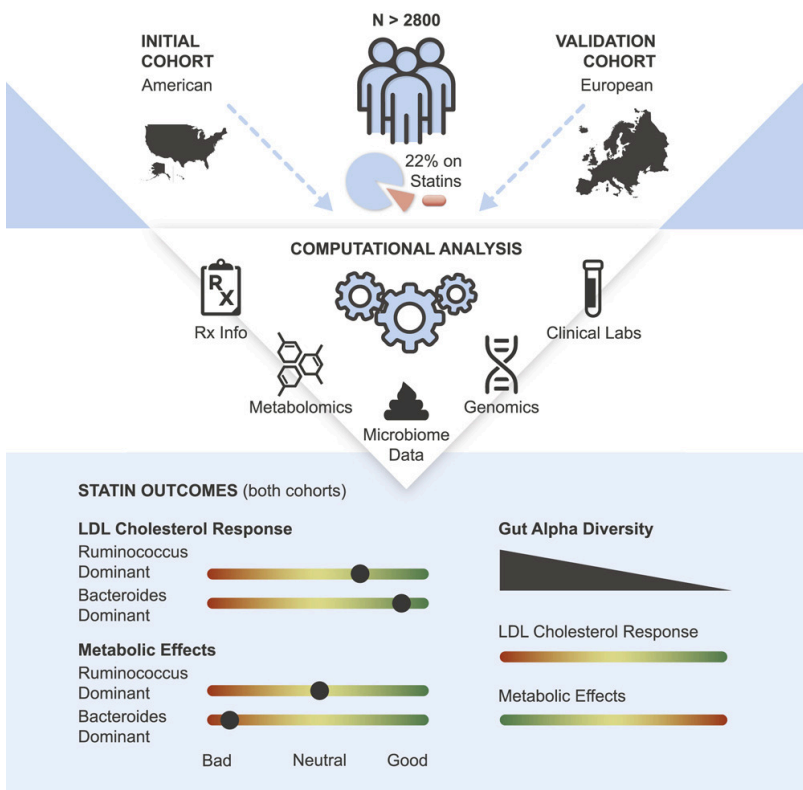

Thanks! 😊

Recruiting a PhD student in winter 2025.

The gut microbiome affects statin efficacy

Heterogeneity in **statin efficacy** is explained by gut microbiome composition.

Looking for **local collaborators** to continue functional analyses.
